

## **LOW HOT CUPBOARD** **MANUFACTURED BY MOFFAT**

- 1) Turn on the gas at the bottle
- 2) Turn the temperature dial (marked OFF) anti-clockwise to the 9 o'clock position
- 3) Push and hold the **RED** button at bottom right and press red ignition button at the top until the pilot lights.

The pilot is located inside the bottom middle of the cabinet and can be viewed through the glass at the bottom of the cabinet after opening the right hand door and when kneeling alongside the operating buttons.

When PILOT has lit - release the **RED** button at bottom right after approx 30 seconds.

- 4) With the pilot lit, set the temperature dial to the required temperature (ensure turned anticlockwise to increase temperature)
- 5) To shut down, press the **WHITE** button at bottom left and finally turn off the gas at the bottle.
- 6) Please be patient when lighting the equipment as it can take a few minutes for the air to clear the pipes before the flame will stay alight

**If the pilot and burners go out the hot cupboard must be completely shut down for at least five minutes before relighting.**
